+1°C = + 12%
more storms...

A woman stands in the center of the frame, wearing a green and white striped short-sleeved top and a blue skirt with a colorful geometric pattern. She is positioned in front of a large, eroded sand dune. The background shows a dry, arid landscape with sparse vegetation, a few trees, and a small, simple building under a blue sky with scattered clouds. The ground is sandy and uneven, with some dry sticks and debris. The overall scene conveys a sense of environmental hardship and climate change.

Natural climate solutions

1. To reduce emissions
2. To capture & store CO₂ from the atmosphere
3. To improve ecosystems' resilience

Forests draw

the excess carbon from the atmosphere

Tropical forests = **30%** of our climate
mitigation potential

16-19 % from stopping deforestation & degradation

8-11% from sustaining forest regrowth

Forests

Restoring 10 million km² by 2050

Could help us stay
under the 1,5°C

Source: IPCC SR1,5 Oct 2018

Net loss

$7.6 - 4.3 = 3.3 \text{ m ha}$

An area larger than Belgium
is lost every year ...
